Summary of the table

1. The table has 10 levels (0 - 9)

2. Dimensions

2.1 Deducted based on the key particles forming the charge & spin table.

2.1.1 Neutron - Neutral.

2.1.2 Proton - 3/2 spin & positively charged.

2.1.3 Electron - 1/2 spin & negatively charged.

2.2 Dimensions are determined by the **three particles** in a **given level** divided by the **spinning particles**.

2.2.1 $D = 3n/2$

As the number of electrons and protons increases per level, the Neutron is enhanced.
